

for tags with grommets

GUIDELINES:

- all artwork within dotted lines (approx. 1/8" from edge of tag)
- convert all text to curves
- if variable numbering is desired embed fonts
- set all artwork to black
- save/export your file as an .eps, .ai or .pdf with all fonts set to CURVES
- if using Adobe Photoshop save your art as black and white 600dpi (dots per inch) .tif or .png
- when creating artwork and typesetting keep in mind that lines thinner than .5pt will not engrave and that we will need to thicken them to achieve good engraving results
