

A. Hardware Included:

- 1. Flag Pole
- 2. Spike Base
- 3. Bungee Cord

B. Connect the Poles:

Assemble the poles by connecting them together. Make sure to align them from the thickest at the base to the thinnest with the rubber tip at the top.

C. Insert the Fabric Flag:

Slip the flag onto the top of the flag pole. Slide all the way down until it cannot go any further.

D. Attach Flag:

Tie the elastic cord through the loop at the bottom of the flag and through the ring. Use the clip to attach the bungee and flag to the metal tab toward the bottom of the pole.

E. Install Ground Anchor:

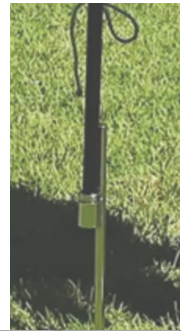

Remove the protective cover from the spike of the ground anchor. Use a hammer on the taller end, opposite the spike, to drive the anchor into the ground deep enough for stability.

Make sure not to hammer on the shorter rotating end.

F. Attach Pole to Ground Anchor:

Insert the bottom of the flag pole into the shorter, rotating end of the ground anchor.

G. Assembly Complete:

Flag will now spin freely in the wind, anchored to the ground with the ground anchor.

Other bases like the X Base and Square plate attach the same way, simply slide the assembled pole and flag set on the base.
